Reviewer's report

Title: Cryo-thawed embryo transfer: natural versus artificial cycle. A non-inferiority trial.(ANTARCTICA trial)

Version: 1 Date: 18 March 2012

Reviewer: Hesham Al-Inany

Reviewer's report:

I am confused about the authors' objectives: are they planning to have patient preferences study, economic analysis study, observing adverse events or all these will be included in the randomised trial. pls explain

Pls explain why to adopt the non inferiority design. there is no meaning of "natural cycle is difficult to plan" as mentioned. we should look to which is more superior

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
