**Title:** Fractures in Women Treated with Raloxifene or Alendronate: A Retrospective Database Analysis

**Version:** 2  **Date:** 27 November 2012

**Reviewer:** Kirsti Uusi-Rasi

**Reviewer's report:**

Minor Essential Revisions

This is an interesting paper, and I have only one request. Please, give the 95% confidence intervals for all results, not only for rate of fractures (Fig.2). It would help the readers to interpret and understand the clinical significance. In such a huge data it is easy to get statistically significant p-values without any clinical significance.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** Yes, but I do not feel adequately qualified to assess the statistics.

**Declaration of competing interests:**

I have no competing interests.
