Reviewer’s report

Title: Dual method contraception among Human Immunodeficiency Virus positive parturient in south eastern Nigeria

Version: 3 Date: 24 November 2013

Reviewer: Karl Peltzer

Reviewer’s report:

Major:
- Is this a prospective or cross-sectional study?
- Under measure it says "An interviewer administered semi-structure questionnaire was used to obtain information on the socio demographic characteristics, as well as the practice of dual contraceptive methods and factors influencing its practice." and in the results somewhere consistency of dual use is reported.

The measures need to be clearly described. How is dual contraceptive or HIV/STI defined? Is this concurrently? or consecutively?

- what was the time frame for the assessment of dual use, past six weeks?
- not sure of the relevance of dual use, six weeks postpartum; is there no postpartum abstinence in Eastern Nigeria, Enugu

Minor:
- numerous spelling mistakes

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
