Reviewer’s report

Title: "If you can’t treat HPV, why test for it?" Women’s attitudes to the changing face of cervical cancer prevention - a focus group study.

Version: 3 Date: 26 March 2014

Reviewer: samuel O Obi

Reviewer’s report:

while this suggestion is discretionary, I must state the authors had not addressed most of the issues highlighted in my previous report as it concerns the methodology especially:
1. How they ensured that the sampled population is representative of the study area.
   it is not enough for the authors to explain this based on the result obtained in the study.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
