Reviewer's report

Title: Trends in Complementary/Alternative Medicine Use by Breast Cancer Survivors: Comparing Survey Data from 1998 and 2005

Version: 2 Date: 23 February 2007

Reviewer: Lynda Balneaves

Reviewer's report:

General

The authors have done a careful job of incorporating the reviewers comments into this manuscript. I agree with the authors decision not to incorporate a statement in the conclusions regarding the need for education/support for patients using or making decisions about CAM during their breast cancer experience. The manuscript will offer a much needed longitudinal perspective of the change that has occured in relation to CAM use in breast cancer populations.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
