Reviewer's report

Title: Curcumin supplementation could improve diabetes-induced endothelial dysfunction associated with decreased vascular superoxide production and PKC inhibition

Version: 3 Date: 12 August 2010

Reviewer: Sorimuthu Subramanian

Reviewer's report:

Since the authors have not indicated a satisfactory response to our primary query that the oral administration of curcumin even at highest concentration did not control the plasma glucose and HbA1c levels the manuscript need not be considered for publication.

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
