Reviewer's report

Title: Olive Oil effectively mitigates Ovariectomy induced Osteoporosis In Rats

Version: 1 Date: 24 December 2010

Reviewer: Han-Jung Chae

Reviewer's report:

Major revision.

Actually, I recommend they need to perform another oil's effect-associated experiments. Olive oil needs to be compared with other oil. The olive oil is specific for the effect, it would be best.

If the authors agree, I would recommend they should perform the 4 set of experiments, SHAM, OILIVE OIL, OVX. Otherwise they need to upgrade the information in Introduction and Discussion more carefully.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
