Reviewer's report

Title: Effects of Green Tea Catechins and Theanine on Preventing Influenza Infection among Healthcare Workers: A Randomized Controlled Trial

Version: 2 Date: 13 January 2011

Reviewer: Margret Moré

Reviewer's report:

The manuscript has improved significantly.

I would recommend to discuss why vaccination did not cause protection from influenza, and include data in what way age influenced disease frequency.

Actually it would be nice to have a figure with bars of the main study results, comparing verum and placebo.

Looking forward to publication!

Level of interest: An article of importance in its field
