Reviewer's report

Title: Antibacterial activity of some selected medicinal plants of Pakistan

Version: 6 Date: 17 May 2011

Reviewer: Moschos Polissiou

Reviewer's report:

The authors should correct or give explanations to the followings:
1. It would be helpful to give the chemical composition or the main components of the crude extracts according to the bibliography.
2. Which was the quantity of methanol used for the extraction of the plant metabolites?
3. Change ml to mL.
4. The authors make a comment concerning the quantity of the active constituents at the last paragraph of Results and Discussion section. This comment is rather arbitrary.
5. At the conclusion, they said that the methanol fraction of Pistacia integerrima proved active against the tested microbes. This is not supported by Table 2.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
