**Title:** Hepatoprotection with chloroform extract of Launaea procumbens against CCl4 induced injuries in rat

**Version:** 2  **Date:** 21 August 2011

**Reviewer:** Omar M Abdel Salam

**Reviewer's report:**

Reviewer report

Manuscript: Hepatoprotection with chloroform extract of Launaea procumbens against CCl4 induced injuries in rat.

I have read the revised version of the manuscript. Although the authors responded to most comments, still there are some points that they did not clarify:

First. For how long CCl4 was given. As I see from the experimental design, it is given once and treatments were continued for one month after CCl4.

Second: The authors mention "fibrosis" and "cirrhosis" which is not the case here since the experiment was an acute one. This single dose of CCl4 can not cause fibrosis.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests.
