Reviewer’s report

Title: Effect of Flabellaria paniculata Cav. extracts on gastric ulcer in rats

Version: 1 Date: 18 May 2012

Reviewer: Seong Hwan Kim

Reviewer’s report:

Authors evaluated the effect of FPL/FPR ethanolic extracts on gastric ulcer in rats and found the effectiveness of FPL. Considering the traditional use of Flabellaria paniculata, this result could provide new insight to its use for the treatment of gastric ulcer. Although I personally ask you to show/suggest the active components (isolated from FPL) with anti-gastric ulcer, this manuscript itself has an ethnopharmacological meaning.

English writing is good, but it should be polished by the expert for improving this manuscript.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
