Reviewer's report

Title: Antioxidant properties of different solvent extract from Carpobrotus edulis (L.) Bolus leaf used for the management of common infections in HIV/AIDS patients in Eastern Cape Province

Version: 10 Date: 23 October 2012

Reviewer: Sarangapani Sreelatha

Reviewer's report:

the manuscript is now modified well. although the authors have reported the phytochemicals initial screening before quantification is essential. Authors would have performed this. If so you can include this in the manuscript. Only after the initial screening with various tests for Phenolics, flavonoids, tannins etc you will be able to do the quantification.

Since this manuscript is only antioxidant and Phytochemical properties it would sound better with the screening data.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
