Reviewer's report

Title: Antioxidant properties of different solvent extract from Carpobrotus edulis (L.) Bolus leaf used for the management of common infections in HIV/AIDS patients in Eastern Cape Province

Version: 9 Date: 3 September 2012

Reviewer: Sarangapani Sreelatha

Reviewer's report:

The manuscript is presented well in Introduction & methodology. Eventhough the data analysed are wide and sufficient, the presentation makes it weak. The presentation of results are quite confusing. Avoid spelling mistakes. for example alkaloids.

What is that difference between groups and within the groups in phytochemical content table? Not able to understand. Change the presentation of the results. it is like a lab note presentation. Better to rewrite the discussion and make it feel like a manuscript. need some more references to be cited. The conclusion has to be modified also.

Overall, Manuscript needs some strong modifications.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
