Reviewer's report

**Title:** Combined effect of CO2 enrichment and foliar application of Salicylic acid on anthocyanin, flavonoids and isoflavonoids production and their antioxidant activity in ginger

**Version:** 7  **Date:** 20 August 2012

**Reviewer:** Ragaa Hosny Mohamad Al-tahtawy

**Reviewer's report:**

There are 17 comments into Major Compulsory Revisions

**Level of interest:** An exceptional article

**Quality of written English:** Acceptable

**Statistical review:** Yes, and I have assessed the statistics in my report.

**Declaration of competing interests:**

The subject is novel because concluded that the increase in anthocyanin and flavonoids in elevated CO2-treated gingers associated with increased antioxidant capacities in both of varieties.
