Reviewer’s report

Title: Antimicrobial activities of endophytic fungi isolated from Ophiopogon japonicus (Liliaceae)

Version: 4 Date: 31 August 2012

Reviewer: Kalavathy Ramasamy

Reviewer’s report:

The authors have satisfactorily responded to the questions raised. However the authors must look at the written English. I also would like to suggest that for Fg2: include only b, c and d.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.
