Reviewer's report

Title: Screening of anti-dengue activity in methanolic extracts of medicinal plants

Version: 4 Date: 18 December 2011

Reviewer: Claire Kubelka

Reviewer's report:

I am very glad to see that authors were able to confirm the inhibition of cytopathic effect observed with some of their compounds with a quantitative assay such as MTT confirming their results. I still think that the mean and standard deviations should be included in table 3 since for a consistent biological result one should repeat the experiment and/or make replicates as they did in table 1.

I think that these improvements will bring much more consistent results and enrich both author's investigation and Journal's report.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
