Title: Development of an Integrated Sasang Constitution Diagnosis Method using Face, Body Shape, Voice, and Questionnaire Information

Version: 1 Date: 9 April 2012

Reviewer: Ali Montazeri

Reviewer’s report:

In general this is an interesting paper that introduces a new diagnosis method for traditional Korean medicine. however, the paper could be improved in several points:
1. The manuscript should be simplified. At present it looks very complicated!
2. It is not very clear how the accuracy of the method is tested?
3. It seems that the authors need to perform sensitivity analysis for their arguments for the accuracy of the method.
4. The issue of training set and test set should be clarified. What are these? How the authors calculated or gained these? etc.
5. The paper would benefit from shortening its length.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
