Reviewer's report

**Title:** Complementary and Alternative Medicine Use in Ghanaian Cancer Patients Undergoing Radiotherapy and Chemotherapy: Characteristics of Users and Implications

**Version:** 1 **Date:** 13 July 2012

**Reviewer:** Christina Gundgaard Pedersen

**Reviewer's report:**

Major compulsory revisions

1. No limitations of the study has been noted especially with respect to representativity of the study. While this may be the first study of a sample from Ghana, the sample size is small, that is < 100, and consists of multiple types of cancers. Multivariate statistics has not been applied, and CAM has been treated as a collapsed construct further limiting interpretation of data. Some of these major imitations should be noted.

Minor essential revisions

1. Table headings in the left column are not easily interpreted in relation to the results. It might help to write the headings on separate lines according to the results instead of separating them by "\".

**Level of interest:** An article of limited interest

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
