Title: Herbal-drug interaction induced rhabdomyolysis in a liposarcoma patient: the hidden foe of trabectidin

Version: 1 Date: 19 March 2013

Reviewer: Pietro Gareri

Reviewer's report:

However, some points need to be addressed:
1) English language must be extensively revised
2) May chokeberry interact with P-glycoprotein?
3) Genetic polymorphism of CYP3A4 might also play a role in trabectidin toxicity
4) Naranjo scale should be applied for supporting the strength of the interaction
5) Stress the need for informing doctors about all nutritional supplements and over-the-counter-drugs taken
6) Pay attention to the abbreviations: in the text they are not reported in extenso the first time they are written.
