Reviewer’s report

Title: Evaluation of estrogenic, antiestrogenic and genotoxic activity of nemorosone, the major compound found in brown Cuban propolis

Version: 1 Date: 8 June 2013

Reviewer: Ada Popolo

Reviewer’s report:

In this study, authors evaluate the role of Nemorosone on breast cancer cells. The study is well organized and the question posed is well defined, although not original.

The data are well controlled.

Discussion and conclusion are well balanced and supported by the data.

The methods are appropriate and well described.

Figure 2 could be improved by eliminating the legend and entering the treatment on the axis, such as in figure 3.

I have no competing interests to raise.

In my opinion the manuscript could be accepted for publication with minor revision.
