Reviewer's report

Title: Moringa Oleifera down-regulates nuclear factor-kappaB and increases cytotoxic effect of chemotherapy in pancreatic cancer cells

Version: 1 Date: 21 March 2013

Reviewer: Nattanan Panjaworayan

Reviewer's report:

Major compulsory revision
- From Figure 2: How do the authors distinguish apoptotic cells from unhealthy or necrotic cells? Although PI staining can reveal the fragment of DNA (Sub-G1), but this can happen in necrotic cells as well.
- Did the author mislabel the figure 3B? Should Moringa be written as curcumin instead? The unit of concentration should also be indicated.
- Please cite reference for effect of curcumin on p65.
- For Figure 1, change “Colo 357” to “COLO 357”.

Minor compulsory revision
- For Figure 1: p # 0.05 and p # 0.001 can be designated by “*” and “**” for every cell lines.
- If the Figure 2B is presented using bar graphs, it will be easier to understand the data.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
