Reviewer's report:

To whom it may concern

After reviewing the article of A.R & M.M titled "Camel milk steatohepatitis, insulin resistance and lipid peroxidation in experimental non alcoholic fatty liver disease" I have the following comments:

1. The questions posed by authors was new and well defined despite the fact, that some elements of the answered questions, were published by other researchers, but that does not decrease the importance of this article.

2. The methodology of this article were proper, and most of them were exclusive and appropriate, all methods of measurements for biochemical analysis and other histopathological examination were approved in other publications, and very objective. The only limitations in those methods, is the induction of hyperlipidemia and the amount of food per day for the experimental animals, but this limitations was mentioned by authors.

3. The triplicate measurements possesses strength of analysis, and I concluded that the results are conclusive and well controlled.

4. The wide spectrum of those data gives this article strength and worth reporting.

5. Since most of the results based on biochemical, biophysical and histopathological findings, which are objective and obvious, so the discussion and conclusions were convincing and adequate.

6. The title and the abstract of the article were related to the findings and accurately chosen.

7. The article was well written and the sequence of writing is understandable, the only mistake in the writing was in the third paragraph of introduction, line two: "it is known to helps" should be (It is known to help) ; and in Paragraph four line six "cellular ailments" should be (cellular elements).

8. The statistical analysis is obvious and not complicated.
Finally I do not see any major compulsory or minor essential revisions, and I consider my revision is only discretionary one, and I found the manuscript of outstanding merit and interest in its field. I advice to accept the manuscript.

**Level of interest:** An article of outstanding merit and interest in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**
