Reviewer's report

Title: Anti-inflammatory effects in muscle injury by transdermal application of gel with Lychnophora pinaster aerial part using phonophoresis in rats

Version: 2 Date: 23 August 2013

Reviewer: Ange A Abena

Reviewer's report:

- This article is very interesting because it's treated a health problem which is present in many diseases, the muscle injury.
- Authors have well defined the question in the background part
- Methods used are appropriate for the evaluation of anti-inflammatory, histological and phytochemical studies
- The manuscript is in accordance of international standards of publications
- The work is clearly limited
- The abstract is accurately in relation with the title
- The writing is good
- References part is rich and adapted to the treated subject
- One of the originality of this work is the use of transdermal application
- For these considerations, I propose that the acceptance of this article for publication without revision.

Quality of written English: Acceptable
