Reviewer's report

Title: Antibacterial constituents of three Cameroonian medicinal plants: Garcinia nobilis, Oricia suaveolens and Balsamocitrus camerunensis

Version: 4 Date: 4 December 2012

Reviewer: Khalid Hussain

Reviewer's report:

1- Authors have addressed the main issue (expression of results)
2- Reference has been provided for the traditional use

The suggestions are given as follows:

1- The language is not correct because extensively two or more tenses have been used in a single sentence. Therefore, the manuscript needs to be checked by a person having English as a native language.

2- Since, authors have disclosed that the three plants are used traditionally alone and in combination. Hence, authors are required to conduct the antibacterial study on combination of extracts and the proportion of extracts needs to be kept the same as being practiced traditionally.

3- The names of families need to be italicized.
