Reviewer's report

Title: Assessing the antibiotic potential of essential oils against Haemophilus ducreyi

Version: 1 Date: 17 February 2014

Reviewer: Elian Khazneh

Reviewer's report:

Discretionary Revisions
The authors did not show the phytochemical analysis of the volatile oils tested. This could be done using GC-MS. The results of the analysis can show if there are any similar compounds in the active volatile oils which could lead to the determination of some constituents with interesting antibacterial activity. The analysis can also reveal the difference in the chemical composition between the active volatile oils and the non-active ones.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
