Reviewer’s report

Title: Evaluation of the anti-Mycobacterium tuberculosis activity and in vivo acute toxicity of Annona sylvatica

Version: 1 Date: 22 April 2014

Reviewer: Veronique SEIDEL

Reviewer’s report:

Overall, a useful contribution to the field but the authors should take note of the following;

Minor essential revisions
Comment 1- The introduction on TB should contain more up-to-date references.
Comment 2- All MICs for pure compounds should be expressed in uM as well as in ug/mL.
Comment 3- The term "antitubercular" instead of "anti-tuberculosis" should be used throughout the manuscript.
Comment 4- The type of silica gel used for CC and Flash chromatography should be specified.
Comment 5- The final bacterial concentration used in the assay should be mentioned.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
