Title: Cytotoxicity of Eupatorium cannabinum L. extracts against colon cancer cells and interactions with Bisphenol A and Doxorubicin

Version: 1 Date: 9 April 2014

Reviewer: Jih-Jung Chen

Reviewer's report:

Comments for the article by Edna Ribeiro-Varandas et al.
In this paper, the authors report “Cytotoxicity of Eupatorium cannabinum L. extracts against colon cancer cells and interactions with Bisphenol A and Doxorubicin”. The comments are attached below.

1. Preparation of manuscript, for example, Experimental Section, References..., must follow the “Guidelines for authors”.
2. In References part, some journal name is given as full name (e.g. Ref. 46. Toxicology and Applied Pharmacology), others are given as abbreviation (e.g. Ref. 48. Mol Cell Probes). They are not identical.
3. Some grammatical errors should be corrected to promote the conceptual flow.
4. There are many minor mistakes in the original manuscript. It must be checked carefully before re-submitting the revised manuscript.
5. “Results” and “Discussion” should be brief and shortened. All redundant data have to be removed.
6. Some bioassay procedures had been published in many past articles. They should be deleted and cited.
7. In general, this manuscript was well written, but some more discussion is needed on results from other workers on similar research to compare values and relationships.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
