Reviewer’s report

Title: Flavones from Erythrina falcata are modulators of fear memory.

Version: 5 Date: 14 June 2014

Reviewer: Pamela Maher

Reviewer’s report:

Overall, the manuscript is much improved and the authors have adequately addressed my concerns. However, there are a few errors that remain.

1. Discussion, pg 22, 1st line of the last paragraph: This sentence should read: “Our HPLC-ESI/MS study identified most of the flavonoids present in the CE of E. falcata.”

2. Discussion, pg 25, 2nd paragraph and pg 26 1st paragraph: There is still an error in describing BuF, BuF3 and BuF4. In both these locations these fractions are described as failing to prevent extinction which is the opposite of what the results show.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
