Reviewer's report

Title: A clinical trial to evaluate the effects of Plantago ovata husk in Parkinson patients: changes in levodopa pharmacokinetics and biochemical parameters

Version: 4 Date: 17 March 2014

Reviewer: Joanna Stewart

Reviewer’s report:

Minor

1. Although in the covering letter there has been an assurance that as well as allowing for the withinperson correlation of measures, period was accounted for in the analysis this has still not been stated in the amended statistical methods section. What model was used in the analysis needs to be clear in the methods section to allow readers to assess the results.

2. The 1st sentence of the abstract still does not make sense (probably just a typo) - it is the final part of the sentence which is a problem '.... due to maintenance of constant plasma concentration of levodopa largely abolishes.....'

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
