Reviewer's report

**Title:** Biopsychological traits of Sasang typology based on Sasang Personality Questionnaire and Body Mass Index

**Version:** 1  **Date:** 14 March 2014

**Reviewer:** Younbyoung Chae

**Reviewer's report:**

This study tried to suggest that the Sasang Personality Questionnaire (SPQ) and Body Mass Index (BMI) would be a method for quantifying the biopsychological characteristics of So-Yang, Tae-Eum, and So-Eum types. Based on the life span biological changes of each Sasang type of a nation-wide sample of 2565 individual, it seems like that there were significant differences SPQ and BMI among three groups.

The study was conducted in a well-organized form and the manuscript is written in quite readable. These studies would provide a useful tool to apply personalized medical intervention.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** Yes, but I do not feel adequately qualified to assess the statistics.
