Reviewer’s report

Title: Protective and restorative potency of Vitamin D on persistent biochemical autistic features induced in propionic acid -intoxicated rat pups

Version: 4 Date: 18 August 2014

Reviewer: Lydia Ferrara

Reviewer’s report:

II revision

Minor Essential Revision

Many of the observations made previously were considered,, but there are still errors in the text and unanswered questions.

What is the color developed in the essay by IFN#?

The conclusions are very small.

In previous work by the same authors have been taken into account the effects of a diet supplemented with lipids and fatty acids omega3.on autistic subjects. Why not check out the action of a diet supplemented with calcium autistic children?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
