Reviewer's report

Title: Perineural pretreatment of bee venom attenuated the development of allodynia in the spinal nerve ligation injured neuropathic pain model; an experimental study

Version: 1 Date: 18 August 2014

Reviewer: Masoumeh Sabetkasaei

Reviewer's report:

1- Why did the authors use rabbit monoclonal antibody for rats.
2- The induction of neuropathic and DBV treatment

In this section the authors describe the animals were anesthetized twice in an hour, I think this is not ethical according to the IASP guideline.
