Reviewer's report

Title: Antinociceptive and anti-inflammatory activities of Geranium bellum and its isolated compounds

Version: 3 Date: 16 September 2014

Reviewer: Lucia Helena Faccioli

Reviewer's report:

Almost of questions raised were done. However, there are still minor errors in the text that need corrections:

1. Please standardize Geranium bellum for G. bellum after the first show. Please see subtitle in the Figures 4 and 6.

2. In the Figure 4: change percentage inhibition from 38.35% for 38%; 42.46% for 43%, etc.

3. There are errors in author names in the references. Exemples: see references 12 and 14: chance Rogerio PA for Rogerio AP. Do the same for the others authors. Please check all names in all the references.

4. There has concordance on the number of animals used. In Methods is written 6-8 animals, but there are not 8 rats or mice in the figures.
