Reviewer's report

**Title:** Subacute administration of crude khat (Catha edulis F.) extract induces mild to moderate nephrotoxicity in rats

**Version:** 1  **Date:** 13 October 2013

**Reviewer:** Ihab Abdel-Raheem

**Reviewer's report:**

Minor Essential Revisions

I go through the revised manuscript entitled: Subacute administration of crude khat (Catha edulis F.) extract induces mild to moderate nephrotoxicity in rats and I found that the author respond fully to some of my pervious comments and did not respond to the other such as determination of GSH levels and total protein content in the urine as an early sign for kidney damage. Although estimation of these two parameters will add to the paper I think the article in its present form may be acceptable for publication. I have no further comments except that the text should revised critically for grammatical errors before accepting it for publication.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** Yes, and I have assessed the statistics in my report.
