Reviewer's report

Title: Evaluation of antimitility effect of Lantana camara L. var. acuelata constituents on neostigmine-induced gastrointestinal transit in mice

Version: 2 Date: 2 July 2005

Reviewer: Samson Amos

Reviewer's report:

General
The authors have diligently carried out most of the studies required. The revision has greatly improved the manuscript. I think the manuscript can be accepted now for publication. I want to thank you for the opportunity to review the manuscript and I look forward to further communications with you.

Dr Samson Amos

-------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

-------------------------------------------------------------------------------------------------------------------

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable
