Reviewer's report

Title: Antidiabetic and renoprotective effects of the chloroform extract of Terminalia chebula Retz. seeds in streptozotocin-induced diabetic rats

Version: 4 Date: 6 April 2006

Reviewer: Mark Miller

Reviewer's report:

General
This is a greatly improved manuscript. The rationale for looking at a lipidic extract of the seeds seems to be artificial, but the results are of interest nevertheless and readers will judge the applicability of the observations.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)
None

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
None

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
