Reviewer’s report

Title: Amelioration of galactosamine-induced nephrotoxicity by a protein isolated from the leaves of the herb, Cajanus indicus L

Version: 2 Date: 19 February 2007

Reviewer: Yoko Aniya

Reviewer’s report:

General

------------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

*****************

The manuscript has been revised in response to reviewers and it seems to be corrected. However there are few questions.

1) page 8, Values of creatinine levels are much lower in the revised manuscript than original one( 0.85+- 0.038 : 4.49 +- 0.12 mg/dl). Authors should explain them.

2) Page 11, In Levels of total thiols: The value (541.25+- 10.83 nmol/mg) in control is much higher compared to GSH(48.41+-2.28 nmol/mg). It is better to explain term of total thiols. (Total thiols involve non-protein thiol such as GSH and much more protein- thiols ?)

3) According to making new figures, make new legends.

------------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

------------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Unable to decide on acceptance or rejection until the authors have responded to the major compulsory revisions

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
