Reviewer's report

Title: Oral Squamous Cell Carcinoma Proliferative Phenotype is Modulated by Proanthocyanidins: A Potential Prevention and Treatment Alternative for Oral Cancer

Version: 3 Date: 11 April 2007

Reviewer: david seigler

Reviewer's report:

General

----------------------------------------------------------------------------------
Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)
The authors cite the company from which they purchased the proanthocyanidins with which they worked. However, they do not cite the product number or type of PACs that they used. Because different sources have different composition, it is important that they do so.

----------------------------------------------------------------------------------
Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

----------------------------------------------------------------------------------
Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
