Reviewer's report

Title: Oral Squamous Cell Carcinoma Proliferative Phenotype is Modulated by Proanthocyanidins: A Potential Prevention and Treatment Alternative for Oral Cancer

Version: Date: 4 June 2007

Reviewer: david seigler

Reviewer's report:

General
I feel that this manuscript presents information that is both accurate, informative and will be of interest to many working in the anticancer and in the natural products areas. I do not find any instances of misinterpretation of data.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)
none

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
I feel that this manuscript presents information that is both accurate, informative and will be of interest to many working in the anticancer and in the natural products areas. I do not find any instances of misinterpretation of data.
with the information they have added, the article is acceptable and represents a valuable contribution. It should be accepted.
I do not have any competing interests.
