Major Compulsory Revisions
None

Minor Essential Revisions
None

Discretionary Revisions
There are still parts of the manuscript written in inferior English. In particular the incorrect use of apostrophes.
The methods section is a little long, with a bit of redundant information regarding dilutions etc.
The results section is a little long, and primarily just repeats the information from the tables.

A point for discussion - It is not surprising that in testing only two new honey varieties, none were found with exceptional activity. A survey of a larger number of South African honeys would be much more likely to uncover honeys with high levels of antibacterial activity.

**Level of interest:** An article of limited interest

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
