Reviewer's report

Title: Patterns of Complementary and Alternative Medicine Use among Individuals with Reported Positive Exceptional Experiences in Relation to Cancer

Version: 2 Date: 4 July 2008

Reviewer: Peter Mackereth

Reviewer's report:

I am pleased to see the changes made in line with my own comments and those of the first reviewer. I think the paper is much more readable and would recommend that the paper being accepted for publication. The briefing paper on the method and analysis was helpful and maybe could be utilised within a separate methodology paper.
