Reviewer's report

Title: Assessment of the medicinal potentials of the methanol extracts of the leaves and stems of Buddleja saligna.

Version: 1 Date: 6 March 2009

Reviewer: Rainer W Bussmann

Reviewer's report:

This is an interesting and well written paper that would merit publication. The methods are clear and concise, and the results well discussed. The only suggestion I have would be to add the codes for the bacterial strains used, assuming that these were commercially available strains. Otherwise the paper looks ready to go, and I do not recommend revisions other than that.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
