Reviewer’s report:

First, let me say thank you for inviting me to review this paper. I think this paper is really proper for your journal. It is wonderful to analyze the apoptosis in colorectal carcinoma and the relation of long-term result.

Second, there are some problems in this article which are showed as follow: (1) table 1 of the 103 patients’ characteristics is too simple, this lack of the tumor’s location, lymph condition, operation type, etc. (2) where is the Cox’s proportional hazards survival analysis result? This may the article’s result unbelievable. (3)The two figures are not corrected. (4) The author need to improve the writing experience.
