Title: Pleomorphic lobular carcinoma of the male breast with axillary lymph node involvement: a case report and review of literature

Version: 2 Date: 2 March 2014

Reviewer: Lingquan Kong

Reviewer's report:

Discretionary Revisions

Pleomorphic lobular carcinoma of the male breast is rare, especially with axillary lymph node metastasis. This report had clinical significance to a certain extent. Would you please add some imaging data in this case.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
