Title: Reference Ranges for Organ Weights of Infants at Autopsy: Results of >1,000 Consecutive Cases from a Single Centre

Version: 2 Date: 7 March 2014

Reviewer: Jacques Jani

Reviewer’s report:

Dear Editor,

Concerns manuscript entitled: “Reference Ranges for Organ Weights of Infants at Autopsy: Results of >1,000 Consecutive Cases from a Single Centre” BY Pryce et al.

In this study, the authors provide a large dataset of major organ weight in infants at autopsy.

This is an impressive series from one of the leader centers in the field. The article is well written, and there are no major concerns in the methodology. The statistical analysis is correct.

This paper has an added value to the current literature and therefore I recommend that it is published.

Yours sincerely.

Level of interest: An article whose findings are important to those with closely related research interests
