Reviewer's report

Title: Limb girdle muscular dystrophy type 2G with myopathic-neurogenic motor unit potentials and a novel muscle image pattern

Version: 4 Date: 11 September 2014

Reviewer: Luis T Negrao

Reviewer's report:

Minor essential revisions

line 48: "...early tibialis anterior involvement on muscle image..."
lines 53-54: "...involvement with tibialis sparing..."
lines 118-124: no information is given about tibialis anterior muscle.

From the examples taken from the manuscript and exemplified above, it is clear that the information about the tibialis anterior muscle is, at least, contradictory. The information about tibialis anterior muscle should be clear and uniform throughout the text.

The comments made in the first review were correctly adapted.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
