Reviewer's report

Title: Comparison of DNA Histograms by Standard Flow Cytometry and Image Cytometry on Sections in Barrett's Adenocarcinoma

Version: 3 Date: 10 November 2007

Reviewer: marianne Lorenzato

Reviewer's report:

General
The authors have correctly modified their manuscript according to the suggestions made.
In my opinion, the manuscript can now be accepted for publication with only a little precision (see minor essential revision)

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
Page 9, line 4, the author have to precise that cells >9N have a ID of at least 4.5.

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

-------------------------------------------------------------------------------

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
