Reviewer’s report

Title: Immunohistochemical and other prognostic factors in B cell non Hodgkin lymphoma patients, Kampala, Uganda

Version: 3 Date: 11 September 2009

Reviewer: Uma N Sundram

Reviewer’s report:

This is a well written paper and a good follow up to the authors’ recent publication in Human Pathology. It is important that lymphomas in underdeveloped countries be studied in this way, not just for the purposes of improving medical care in these countries, but also to explore if causes of disease are different in developing countries. The questions being answered by the studied are well defined, the data is sound, and the discussion and conclusions support the data derived in the paper. The limitations of the study are stated clearly, and the authors refer appropriately to their prior paper but do not duplicate its results.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
