Reviewer's report

Title: An innovative OSCE Clinical Log station: a quantitative study of its influence on Log use by medical students

Version: 1 Date: 21 August 2012

Reviewer: David Snadden

Reviewer's report:

This is a very well written, very simple study that examines the effect on the quantity of reflection in relation to the introduction of one OSCE station in an OSCE exam related to a clinical log. The statistics are only descriptive using means and raw numbers.

There are some interesting insights into the study which will add to the literature in this area.

My review is attached.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
