Reviewer’s report

Title: Team-based learning for psychiatry residents: a mixed methods study

Version: 2 Date: 15 June 2013

Reviewer: Nachiket Shankar

Reviewer’s report:

The authors have addressed many of the issues that were raised. However, it would have been appropriate to give point-wise replies (with references made to changes in the manuscript) to each of the comments made by the reviewer, rather than a blanket statement mentioning that the changes were made.

Minor essential revisions
1) In the statistical analysis part of the methods section, the inferential statistical methods (for example, T test) that were used need to be clearly stated.

2) A paired sample T test would have been more appropriate for the VTS part of the results, as mentioned earlier.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
